

Mr. Srečko Čadonič,

is the **CEO of Innte Technologies**, a company developing new water treatment technologies and procedures. His scientific work has led to new water treatment breakthroughs that improve existing capabilities and solve previously impossible problems such as nitrate removal from drinking water. His company has successfully made its first steps into the Paraguayan market, hoping to solve existing water problems, improve access to drinking water for millions, and unlock economic growth by enabling access to previously non-viable drinking water sources.
